

Let the Flare See the Air!

Wednesday, April 21, 2021 • 6:00pm-7:00pm

Held online as a virtual webinar

*Just say no
to volcano!*

*Dump the
hump!*

*Too MULCH of a
good thing!*

*Chill with
the hill!*

Thousands of trees are planted each year but many are planted incorrectly - too low and with mulch piled around the base. These practices cover the root flare of the tree - the area where the trunk meets the roots. The root flare is critical for oxygen exchange and proper root growth. When it is covered up, roots circle around the base restricting the tree's ability to transport water. The bark begins to rot. The tree can suffocate and die. We want the trees planted to be successful and live long, happy lives. Join us to learn more about proper tree care.

Presenter: Amy Roskilly,
Cuyahoga Soil & Water Conservation District

REGISTER ONLINE!

Workshop is free but registration required:
